**Who lives here?**

Grandpa is a funny guy. He says that at his house there are 14 feet and 2 tails. Who might live at Grandpa's house?

Show all your work. Explain in words how you found your answer. Tell why you took the steps you did to solve the problem.

**Make sure you**

- show all your work in solving the problem,
- clearly label your answer,
- write in words how you solved the problem,
- write in words why you took the steps you did to solve the problem, and
- write as clearly as you can.

**Exemplars Math K-2 Sample ([www.exemplars.com](http://www.exemplars.com))**

**Placas de Automóvil / License Plates**

***Espanol***

En un paseo reciente buscamos placas de automóviles que tuvieran 3 números. Demuestra todas las placas que encontramos con números que al sumarse equivalen al número 6.

Explica todo tu trabajo utilizando dibujos, números, y palabras.

***English***

On a recent car trip we looked for license plates that had 3 numerals on them. Show all of the license plates that we found that had numbers that added up to 6.

Explain all of your work using pictures, numbers, and words.

---

You have four samples of student solutions to this problem.

- Examine them and discuss them with others at your table.
- Put them in order of mathematical complexity – novice, apprentice, practitioner, expert.
- What evidence of student thinking can you see that helps you assign the samples to different levels of complexity?

<i>Level</i>	<i>What you notice about student work sample</i>
<b>Novice</b>	
<b>Apprentice</b>	
<b>Practitioner</b>	
<b>Expert</b>

# Mixed Addition and Subtraction Stories

**Objective** To guide children in selecting and completing an appropriate diagram to help solve an addition or subtraction problem.

## 1 Teaching the Lesson

### Key Activities

Children categorize number stories as change, parts-and-total, or comparison problems; fill in an appropriate diagram to record known and missing information; and write number models to summarize their solutions.

### Key Concepts and Skills

- Explain solution strategies.  
[Operations and Computation Goal 2]
- Solve 2-digit addition and subtraction problems within number stories.  
[Operations and Computation Goal 2]
- Identify change, parts-and-total, and comparison number stories.  
[Operations and Computation Goal 4]

★ **Ongoing Assessment:** Informing Instruction See page 398.

★ **Ongoing Assessment:** Recognizing Student Achievement Use Journal page 141.  
[Operations and Computation Goal 2]

### materials

- Math Journal 1, p. 141
- Home Link 6-3
- Teaching Aid Master (Math Masters, p. 437); 2 copies per child
- Transparency (Math Masters, p. 437; optional)
- slate
- number grid; number line (optional)

See Advance Preparation

## 2 Ongoing Learning & Practice

Children practice ballpark estimation.

Children practice and maintain skills through Math Boxes and Home Link activities.

### materials

- Math Journal 1, pp. 142 and 143
- Home Link Masters (Math Masters, pp. 167 and 168)
- calculator

## 3 Differentiation Options

### READINESS

Children use counters to solve a number story told by a partner.

### ENRICHMENT

Children make up parts-and-total, comparison, and change number stories.

### EXTRA PRACTICE

Children make up addition number stories.

### materials

- Teaching Aid Masters (Math Masters, pp. 419 and 437)
- Minute Math<sup>®</sup>+, p. 16
- counters or tool-kit coins

## Additional Information

**Advance Preparation** For the second activity in Part 1, you might want to make an overhead transparency of Math Masters, page 437.

## Technology

Assessment Management System  
Journal page 141, Problems 1 and 2  
See the ITLG.

# Getting Started

## Mental Math and Reflexes

Write multiple-addend problems on the board. Encourage children to look for combinations that will make the addition easier.

- ? =  $43 + 5 + 7$  55
- $6 + 8 + 9 = ?$  23; no particularly easy way to add these numbers
- ? =  $1 + 15 + 29 + 5$  50

## Math Message

Make a list of some things you like to collect.

## Home Link 6-3 Follow-Up

Ask comparison questions about the survey data such as the following:

- How many more people like watermelon than like grapes?

Ask parts-and-total questions, such as the following:

- What is the total number of people who like apples and pears?

## 1 Teaching the Lesson

### ► Math Message Follow-Up

(Math Journal 1, p. 141)

INDEPENDENT ACTIVITY

Ask children to describe some of the things they like to collect. Record their responses on the board. Sample answers: coins, shells, sports cards, dolls, stuffed animals

Have each child select two items to use as topics for number stories on the journal page. Different children might select different things.

Problems 1 and 2 on the journal page have answer blanks within their number stories. Ask children to select one item for each problem and to write that item in all the empty boxes. For example, suppose "coins" is one of the selected items. Problem 1 would be completed as follows: Colin has 20 coins. Fiona has 30 coins. How many coins do they have in all?

### ► Selecting Diagrams and Solving Number Stories

(Math Journal 1, p. 141; Math Masters, p. 437)

INDEPENDENT ACTIVITY

Until now, lessons have focused on one type of number story at a time. For example, all the problems in Lesson 6-2 were based on comparison stories, and the comparison diagram was the only diagram used. In this lesson, children are asked to categorize addition and subtraction stories: They must decide which type of story (change, parts-and-total, or comparison) best matches the problem at hand and then use the appropriate diagram to find a solution.

The journal page contains four number stories, and the master has two sets of diagrams. Each set includes a change diagram, a parts-and-total diagram, and a comparison diagram.

**Journal Page**

Date: \_\_\_\_\_ Page: \_\_\_\_\_

**6-3 Addition and Subtraction Number Stories**

Do the following for each problem:

- Choose one diagram from Math Masters, page 437.
- Fill in the numbers in the diagram. Write ? for the number you want to find. Find the answer. Write a number model.
- In Problems 1 and 2, write your own unit.

★ Colin has 20. **Answers vary.** ★ Alexi had 34. **Answers vary.**

Fiona has 30. He gave 12 to Theo. How many does Alexi have now?

How many do they have in all? Alexi has 22

Colin and Fiona have 50. (unit) (unit)

Number model:  $20 + 30 = 50$  Number model:  $34 - 12 = 22$

3. Rushing Waters has 26 water slides. Last year, there were only 16 water slides. How many new slides are there this year? It is 20 feet shorter.

There are 10 new water slides. Number model:  $26 - 16 = 10$  or  $16 + 10 = 26$

4. The Loop Slide is 65 feet high. The Tower Slide is 45 feet high. How much shorter is the Tower Slide? Number model:  $65 - 45 = 20$  or  $45 + 20 = 65$

Math Journal 1, p. 141

Math Masters p. 437

Start	Change	End
16	?	26

Quantity  
26

### Comparison Diagram

## 398 Unit 6 Whole-Number Operations and Number Stories

**Summary:** The purpose of diagrams is to help children organize the information in a number story, identify the missing information, and determine whether to add or subtract to solve the problem. Children should be encouraged to select the diagram that best matches the way they see the problem. There is no right or wrong diagram for any given problem; what matters is that the chosen diagram matches the child's thinking and is used as a tool for finding the correct answer.

## 2 Ongoing Learning & Practice

### ► Reviewing Ballpark Estimation

(Math Journal 1, p. 142)

INDEPENDENT  
ACTIVITY

Children complete this journal page by finding a ballpark estimate for each problem. They then solve the problem using a calculator. When most children have completed this journal page, have them compare their estimates to the exact answer to see if the exact answer is in the ballpark of their estimate. Discuss.

### ► Math Boxes 6•4

(Math Journal 1, p. 143)

INDEPENDENT  
ACTIVITY

Mixed Practice Math Boxes in this lesson are paired with Math Boxes in Lesson 6-2. The skill in Problem 6 previews Unit 7 content.

### ► Home Link 6•4

(Math Masters, pp. 167 and 168)

INDEPENDENT  
ACTIVITY

**Home Connection** Children make up number stories to match diagrams. Then they solve their number stories and complete a number model.

## 3 Differentiation Options

READINESS

### ► Solving a Partner's Number Story

PARTNER  
ACTIVITY

5-15 Min

To provide experience with number stories, have children tell a partner a number story. Encourage them to tell change stories and parts-and-total stories. Children can use counters or coins to model their stories. They use the laminated diagrams and act out

**Journal Page**

Date: \_\_\_\_\_

### Ballpark Estimates

Fill in the unit box. Then, for each problem:

- Make a ballpark estimate before you add.
- Write a number model for your estimate.
- Use your calculator to solve the problem. Write your answer in the answer box.
- Compare your estimate to your answer.

Sample estimates:

1. Ballpark estimate: $50 + 10 = 60$ 48 + 7 Answer: 55	2. Ballpark estimate: $60 + 10 = 70$ 63 + 9 Answer: 72	3. Ballpark estimate: $30 + 50 = 80$ 33 + 45 Answer: 78
4. Ballpark estimate: $20 + 10 = 30$ 23 + 10 Answer: 37	5. Ballpark estimate: $50 + 30 = 80$ 78 + 32 Answer: 80	6. Ballpark estimate: $50 + 40 = 90$ 45 + 38 Answer: 83

Math Journal 1, p. 142

**Journal Page**

Date: \_\_\_\_\_

### Math Boxes

1. Fill in the frames.

$-10$   $+2$

157 147 149 139  
131 141

2. Draw all the possible ways to show 35¢ using 6¢, 9¢, 2¢.

3. Write  $>$ ,  $<$ , or  $=$ .

$5 + 3 + 18 \geq 20$   
 $8 + 7 + 6 \leq 36$   
 $76 \leq 28 + 32 + 21$   
 $100 = 25 + 25 + 50$

4. Which line segment is about 1 inch long? Choose the best answer.

5. 1 hour earlier is 8:35  
1 hour later is 10:35

6. In out Rule  
4 2  
8 4  
22 10  
110 58

Math Journal 1, p. 143

**Home Link Master**

Name \_\_\_\_\_ Date \_\_\_\_\_ Time \_\_\_\_\_

**6-4 Number Stories and Diagrams**

**Family Note:** We make stories from 24 and 6 more to write number stories. Write a story that shows 24 and 6 more to explain how you know the diagram and the number model. (Use Home Link 6-3 and 6-4 for information about making the number diagram.)

Write number stories to match each diagram. Then finish the number model. Tell your stories to someone at home.

1. **Unit:** building blocks

Start	Change	End
24	+6	?

Sample answer: There were 24 building blocks standing. 6 more were added on. How many were standing?

Finish the number model:  $24 + 6 = 30$

2. **Unit:** books

Total	
?	
Part	Part
15	13

Sample answer: Bob read 15 books. Susie read 13 books. How many books in total did they read?

Finish the number model:  $15 + 13 = 28$

Math Masters, p. 167

the story with counters and coins. For example, *Julia had 48 cents, and Marcus had 35 cents. If Marcus gives his money to Julia, how much money will she have?* Children can place the coins in a change diagram and figure out the total. *How much did Julia and Marcus have all together?* Children can place the coins in the parts-and-total diagram and figure out the total.

**ENRICHMENT**

► **Using Different Diagrams to Write Number Stories**

(Math Masters, pp. 437 and 419)

**INDEPENDENT ACTIVITY**

15–30 Min

To further explore addition and subtraction number stories, have children solve a number story using all three diagrams. Tell children a number story. For example say: *Francis wanted to buy a toy turtle from the store. He had 67 cents. The turtle cost 83 cents.* Have them fill in all three diagrams (with a question mark for the missing number) to show how all three diagrams could be used to solve the problem correctly. When they have finished, have them explain their thinking.

**EXTRA PRACTICE**

► **Minute Math+**

**SMALL-GROUP ACTIVITY**

5–15 Min

To offer children more experience with making up number stories, see the following page in *Minute Math+*: p. 16.

**Home Link Master**

Name \_\_\_\_\_ Date \_\_\_\_\_ Time \_\_\_\_\_

**6-4 Number Stories and Diagrams cont.**

3. **Unit:** bananas

Quantity
28
Quantity
8
Difference
?

Sample answer: The monkey had 28 bananas. It ate 8. How many did it have left?

Finish the number model:  $28 - 8 = 20$

4. **Unit:** baseball cards

Total	
50	
Part	Part
?	37

Sample answer: I collected 50 baseball cards. Then I sold 37. How many did I have left?

Write a number model for your story.

Number model:  $50 - 37 = 13$  or  $13 + 37 = 50$

# Lesson

## 6

2<sup>nd</sup> grade MTB

## Snack Shop Addition and Subtraction

Estimated  
Class Sessions

1

### Lesson Overview

Students use calculators to solve addition and subtraction problems based on the *Shooting Star Snack Shop Children's Menu* introduced in Unit 9. Students calculate total snack shop bills and determine the amount of change or the additional money needed.

### Key Content

- Solving problems involving money.
- Solving addition and subtraction problems using calculators.
- Estimating sums and differences.

### Math Facts

DPP item Q is a quiz on the subtraction facts for Group A.

### Homework

Assign the *Snack Shop Carryout 2* Homework Pages to give students more practice adding and subtracting priced items. Children need to take home the menu to complete this assignment.

### Assessment

1. Use Assessment Indicator A4 and the *Observational Assessment Record* to document students' abilities to solve problems involving money.
2. For assessment, ask students to solve a subtraction problem two different ways.
3. Use DPP item Q, Assessment Indicator A6, and the *Observational Assessment Record* to document students' fluency with the subtraction facts for Group A.
4. Transfer appropriate documentation from the Unit 11 *Observational Assessment Record* to students' *Individual Assessment Record Sheets*.

## Materials List

### Supplies and Copies

Student	Teacher
<b>Supplies for Each Student Pair</b> <ul style="list-style-type: none"> <li>• calculator</li> <li>• counters such as connecting cubes</li> <li>• base-ten pieces</li> </ul>	<b>Supplies</b> <ul style="list-style-type: none"> <li>• overhead calculator, optional</li> </ul>
<b>Copies</b> <ul style="list-style-type: none"> <li>• 1 copy of <i>200 Chart</i> per student (<i>Unit Resource Guide</i> Page 41)</li> </ul>	<b>Copies/Transparencies</b> <ul style="list-style-type: none"> <li>• 1 transparency of <i>Shooting Star Snack Shop Children's Menu</i>, optional (<i>Student Guide</i> Page 305)</li> <li>• 1 transparency of <i>Snack Shop Sample</i> (<i>Unit Resource Guide</i> Page 81)</li> </ul>

All blackline masters including assessment, transparency, and DPP masters are also on the Teacher Resource CD.

### Student Books

*Shooting Star Snack Shop Children's Menu* (*Student Guide* Page 305)

*Snack Shop Bills 2* (*Student Guide* Pages 306–308)

*Snack Shop Carryout 2* (*Student Guide* Pages 309–310)

### Daily Practice and Problems

DPP items Q–R (*Unit Resource Guide* Pages 25–26)

Note: Classrooms whose pacing differs significantly from the suggested pacing of the units should use the Math Facts Calendar in Section 4 of the *Facts Resource Guide* to ensure students receive the complete math facts program.

### Assessment Tools

*Observational Assessment Record* (*Unit Resource Guide* Pages 11–12)

*Individual Assessment Record Sheet* (*Teacher Implementation Guide*, Assessment section)

## Daily Practice and Problems

Suggestions for using the DPPs are on pages 78–79.

### Q. Subtraction Facts Quiz: Group A (URG p. 25)

- A.  $1 - 0 = \underline{\quad}$
- B.  $2 - 1 = \underline{\quad}$
- C.  $6 - 2 = \underline{\quad}$
- D.  $\underline{\quad} = 5 - 3$
- E.  $4 - 2 = \underline{\quad}$
- F.  $\underline{\quad} = 3 - 1$
- G.  $1 - 1 = \underline{\quad}$
- H.  $3 - 2 = \underline{\quad}$
- I.  $6 - 4 = \underline{\quad}$
- J.  $2 - 0 = \underline{\quad}$
- K.  $\underline{\quad} = 4 - 3$
- L.  $2 - 2 = \underline{\quad}$
- M.  $4 - 1 = \underline{\quad}$
- N.  $5 - 2 = \underline{\quad}$

Explain how you solved Question N.

### R. Story Problems (URG p. 26)

Make up a story for each of these number sentences.

- A.  $45 - 7 = \underline{\quad}$
- B.  $71 + \underline{\quad} = 89$
- C.  $13 - \underline{\quad} = 7$

Snack Shop Addition and Subtraction      5th • Circle 2 • Unit 11 • Lesson 6      305

Student Guide - page 305

### Teaching the Activity

Have children turn to the *Shooting Star Snack Shop Children's Menu* Activity Page as you display the *Snack Shop Sample* Transparency Master. Read the problem and solve it as a class. Have students explain their thinking and demonstrate how they would solve the problem. Discuss more than one method. Some may solve it in their heads, while others choose to use counters, the *200 Chart*, base-ten pieces, or paper and pencil. Some students may suggest using the calculator. Distribute calculators and introduce keystrokes for subtraction.

Ask:

- *Pretend you have \$2.00 to spend at the snack shop. What would you order?*

List orders on the board. As a class determine the amount of change each student would receive. Encourage students to share their strategies.

After the class solves a few problems, summarize their work by discussing the steps students may have taken as they solved each one. The steps may include: locating or choosing items on the menu, estimating whether there is enough money, calculating the total, and finding the amount of change or the amount of money needed.

## Assessment

- Observe students as they solve the problems in the *Student Guide*. Use the *Observational Assessment Record* to document students' abilities to solve problems involving money.
- Throughout this unit, students explored many methods of finding the answers to subtraction problems. Assess whether your students can solve a problem in more than one way. Have many types of math tools available for students such as counters, calculators, base-ten pieces, *200 Charts*, and paper and pencil. Write a subtraction problem on the board and ask students to solve it two different ways. They can use pictures and words to describe their solution paths.
- Use DPP item Q and the *Observational Assessment Record* to document students' fluency with the subtraction facts for Group A.
- Transfer appropriate documentation from the Unit 11 *Observational Assessment Record* to students' *Individual Assessment Record Sheets*.

# Exemplars® Standards-Based Math Rubric\*

	Problem Solving	Reasoning and Proof	Communication	Connections	Representation
<b>NoVice</b>	No strategy is chosen, or a strategy is chosen that will not lead to a solution.  Little or no evidence of engagement in the task present.	Arguments are made with no mathematical basis.  No correct reasoning nor justification for reasoning is present.	No awareness of audience or purpose is communicated.  or  Little or no communication of an approach is evident  or  Everyday, familiar language is used to communicate ideas.	No connections are made.	No attempt is made to construct mathematical representations.
<b>Apprentice</b>	A partially correct strategy is chosen, or a correct strategy for only solving part of the task is chosen.  Evidence of drawing on some previous knowledge is present, showing some relevant engagement in the task.	Arguments are made with some mathematical basis.  Some correct reasoning or justification for reasoning is present with trial and error, or unsystematic trying of several cases.	Some awareness of audience or purpose is communicated, and may take place in the form of paraphrasing of the task.  or  Some communication of an approach is evident through verbal/written accounts and explanations, use of diagrams or objects, writing, and using mathematical symbols.  or  Some formal math language is used, and examples are provided to communicate ideas.	Some attempt to relate the task to other subjects or to own interests and experiences is made.	An attempt is made to construct mathematical representations to record and communicate problem solving.

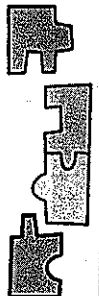

\*Based on revised NCTM standards.

# Exemplars® Jigsaw Student Rubric

Level	Problem Solving	Reasoning and Proof	Communication	Connections	Representation
<b>Novice</b> Makes an effort No or little understanding	I did not understand the problem. 	My math thinking is not correct. 	I used no math language and/or math notation. 	I did not notice anything about the problem or the numbers in my work. 	I did not use a math representation to help solve the problem and explain my work. 
<b>Apprentice</b> Ok, good try Unclear if student understands	I only understand part of the problem. My strategy works for part of the problem. 	Some of my math thinking is correct. 	I used some math language and/or math notation. 	I tried to notice something, but it is not about the math in the problem. 	I tried to use math representation to help solve the problem and explain my work, but it has mistakes in it. 
<b>Practitioner</b> Excellent Clear Strong understanding Meets the standard	I understand the problem and my strategy works. My answer is correct. 	All of my math thinking is correct. 	I used math language and/or math notation throughout my work. 	I noticed something about my math work. 	I made a math representation to help solve the problem and explain my work, and it is labeled and correct. 
<b>Expert</b> Wow, awesome! Exceptional understanding!	I understand the problem. I used a rule, and/or verified that my strategy is correct. 	I showed that I knew more about a math idea that I used in my plan. Or, I explained my rule. 	I used a lot of specific math language and/or notation throughout my work. 	I noticed something in my work, and used that to extend my answer and/or I showed how this problem is like another problem. 	I used another math representation to help solve the problem and explain my work in another way.

Nivel	Solución de Problemas	Razonamiento y Pruebas	Comunicación	Conexiones	Representación
Novato Hace un esfuerzo Ninguna o poca comprensión	No comprendí el problema. 	Mi razonamiento matemático no es correcto. 	No usé ni lenguaje matemático ni anotación matemática. 	No observé nada sobre el problema ni los números en mi trabajo. 	No usé una representación matemática para ayudar a solucionar el problema ni para explicar mi trabajo. 
Aprendiz Está bien, un buen esfuerzo No está claro si el estudiante comprende el problema o no	Comprendo sólo una parte del problema. Mi estrategia funciona para parte del problema. 	Parte de mi razonamiento matemático es correcto. 	Usé algo del lenguaje matemático y/o anotación matemática. 	Intenté observar algo, pero no es sobre las matemáticas en el problema. 	Intenté usar una representación matemática para ayudar a solucionar el problema y explicar mi trabajo, pero hay errores. 
Practicante Excelente Claro Comprensión fuerte Llega al estandar	Comprendo el problema y mi estrategia funciona. Mi respuesta es correcta. 	Todo mi pensamiento matemático es correcto. 	Usé lenguaje matemático y/o anotación matemática en todo mi trabajo. 	Observé algo sobre mi trabajo matemático. 	Hice una representación matemática para ayudar a solucionar el problema y explicar mi trabajo y está claramente indicada y correcta. 
Experto ¡Wow! ¡Qué chévere! ¡Comprensión excepcional!	Comprendo el problema. Usé una regla y/o verifiqué que mi estrategia es correcta. 	Demostre que sabía más sobre una idea matemática que lo que usé en mi plan. O, expliqué mi regla. 	Usé mucho lenguaje matemático específico y/o anotaciones en todo mi trabajo. 	Observé algo en mi trabajo y lo usé para extender mi respuesta y/o mostré cómo este problema se parece a otro problema. 	Usé otra representación matemática para ayudar a solucionar el problema y explicar mi trabajo de otra manera.
